Subject Index

L – Letter

A
Acetobacter diazotrophicus 139
acid stress, bacteria 214
acr gene 111
N-acyl homoserine lactones (AHLs) 288
addiction (programmed cell death) systems 269
adenine nucleotides, in yeast 318
adenoviruses
  inhibitors of apoptosis 337
  nuclear entry/exit 179
adhesins
  Helicobacter pylori 379, 380, 381
  neisserial 489
  in staphylococcal vaccines 461
  surface protein, *Staphylococcus aureus* 484
adhesion (adherence)
  Candida albicans 300, 302
  enteric bacteria 282
  Listeria monocytogenes 11
  to M cells 360
  Mycoplasma pneumoniae 15
  mycoplasmas 436
Agrobacterium tumefaciens 99 (L), 254
  T-DNA 179
AIDS
  pathogenesis 244
  Pneumocystis carinii pneumonia 71
amino acid decarboxylation–antiporter reactions 214
anaerobiosis, bacterial 214
animal models, periodontal disease 444
anti-inflammatory agents, development of novel 154
antibiotics
  β-lactam, bacterial production 203
  development of novel 66, 154
  production by *Streptomyces* 76
antibody-mediated immunity
  intracellular pathogens 102, 135 (L), 136
  Salmonella infections 102, 135 (L), 136, 470 (L), 471
antifungal drugs
  novel 117, 348
  resistance 468
antigen presentation
  bacterial lipids by CD1 454
  in cytomegalovirus infection 190
antigen-presenting cells (APCs), recognition of bacterial DNA 497
antigenic variation, in *Trypanosoma brucei* 113
antimicrobials
  leprosy control 217
  naturally occurring 121
  plant-derived 56
  resistance *see* drug resistance
antiviral drugs, in HIV infection 129
AP-1 176, 177
Apicomplexa 27, 343, 345
apoptosis, adenoviral inhibitors 337
Aquifex aeolicus 351 (L)
Arabidopsis thaliana 1
Archaea 347
  enzymes 307
  transcription and translation 222
Archaeoglobus fulgidis 226
Archezoa 21
aspartyl-phosphate phosphatases 367
ATCC 262
atopic dermatitis, bacterial superantigens and 61
attaching and effacing (A/E) pathogens 169, 172, 388 (L)
attachment organelle, *Mycoplasma pneumoniae* 15
autocatalytic mechanism, *Volvox* sexual development 188
autoimmune disease
  Helicobacter pylori-mediated 380
  molecular mimicry and 211
autotransporter proteins 370, 388 (L)
avirulence (*avr*) genes 3
Azoarcus 139

B
B lymphocytes, B cells
  activation by CpG DNA 23
  murine gammaherpesvirus-68 infection 279
baboon endogenous retrovirus (BaEV) 413, 430 (L)
baboons, risk of xenotransplant-associated infections 411, 430 (L), 431 (L), 432 (L)
Bacillus subtilis 6, 17, 234
  peptide signaling 288
  sporulation initiation 366
Bacillus thuringiensis 56
bacteriocins 66
bacteriophages, bacterial virulence and 295
BCG, murine resistance to 441
Bcg/Lsh/Ity gene 148, 441
β-barrels, autotransporter proteins 372, 389 (L)
β-lactamases, evolution 323
β-lactams, biosynthetic pathways 203
Bifidobacterium 90
biofilms 383
biotechnology, task group 138
biotherapeutic agents 90
Bordetella pertussis 254
Borrelia burgdorferi 44, 386
borreliosis 44
bovine papilloma virus, E6 174
bovine retroviruses 412
British Society for Plant Pathology 53
Buchnera, evolution 265
Bunyaviridae 31

C
cAMP, in *Dictyostelium* development 402
cAMP-dependent protein kinase A (PKA) 402
Campylobacter jejuni 285
cancer
  Epstein–Barr virus and 175
  human papillomavirus (HPV) and 424
Candida albicans 468
  hyphal formation and virulence 92
  INT1 300, 302
  protective effects of probiotics 91
Candida infections 468
candidiasis 92, 468
carbapenems, bacterial production 203
caseous necrosis, in tuberculosis 95, 181 (L)
caspases 337
Caulobacter crescentus 17, 234
CbpA 86
CcdB toxin 269
cCF10 (peptide pheromone) 292
CD1, antigen presentation by 454
$CD4^+$ T cells
  gut lamina propria, HIV/SIV infection 419, 420
  latent HIV infection 129
  in *Pneumocystis carinii* infection 71, 97 (L)
  telomeres in HIV-1 infection 144
$CD8^+$ T cells
  CpG DNA vaccines activating 24
  in cytomegalovirus infection 190, 260 (L)
  telomeres in HIV-1 infection 144
CD40 175, 177
CD66, Opa-mediated interactions 491
CD95 (Fas) 337
cell–cell signaling
  bacterial 288, 382
  in *Dictyostelium* development 402
cell division, circadian rhythms and 407
cell entry/invasion
  HIV-1 244
  into M cells 359
  Mycobacterium tuberculosis 328
  mycoplasmas 437
  Neisseria 489
  Porphyromonas gingivalis 88
  tobacco mosaic virus 466
  Toxoplasma gondii 27, 98 (L)
cell fusion, mycoplasmas/host cells 437
cell receptors
  Mycobacterium tuberculosis 328
  picornaviruses 198
cell tropism
  HIV-1 244
  picornaviruses 198
cell-type proportioning, in *Dictyostelium* 405
Cenarchaeum symbiosum 311
cervical cancer 173, 425
chaperones
  bacterial propeptides as 6, 8
  as microbial virulence factors 426
chemokine receptors, HIV-1-specific 244
chloroplasts
  genome reduction 267
  transcription 1
cholera toxin (CT) 296, 451
chromosomes
  insertion techniques 76

segregation in bacteria 233
chronic bacterial infections 303 (L)
ciliates, macronucleus 322
circadian programs, in cyanobacteria 407
citrate synthase 307
clavams, bacterial production 203
clavulanic acid 203
clonality, *Salmonella typhi* 339
Clostridium difficile 285
Clostridium septicum 7, 8
Clostridium symbiosum 309
clumping factors (ClfA, ClfB) 486
coagulation, microbial interactions 428
codon reassignments, mitochondrial tRNAs 264
colicins 66
collagen-binding protein, *Staphylococcus aureus* 485
competence
natural 297
regulon 297, 299
competence and sporulation factor (CSF) 288
competence-stimulating peptide (CSP) 297
competition studies, circadian programs of cyanobacteria 408
complement receptor 3 (CR3) 328
complement system
in cytomegalovirus infections 195
and *Mycobacterium tuberculosis* 47, 49
ComX pheromone 288
conjugative transfer
Legionella pneumophila icm/dot genes 253, 256
signaling peptides 292
consensus primer polymerase chain reaction (PCR) 180 (L)
Cornell model, latent tuberculosis 109
Corynebacterium diphtheriae 354
coxsackieviruses, cell receptors 198
CpG dinucleotides
in DNA vaccines 23, 499
immune cell activation 496
CR3 328
Cryptococcus neoformans 104
CTXϕ 296
cyanobacteria, circadian programs 407
cytadherence, *Mycoplasma pneumoniae* 15
cytokines
induction by mycoplasmas 438
Shiga toxin interactions 228
cytokinesis, in prokaryotes 233
cytomegalovirus (CMV), immune evasion 190, 260 (L)
cytoskeleton
bacterial 233
Mycoplasma pneumoniae 15
cytotoxicity, *Legionella pneumophila* 253, 256

D

daptomycin 79
decay-accelerating factor (DAF) 199
defensins 58
degenerate polymerase chain reaction (PCR) 160
diarrhea 169, 228
diazotrophic endophytes 139, 202
Dictyostelium, cell–cell signaling in development 402
differential fluorescence induction (DFI) 241
DNA vaccines 23, 499
DNA gyrase 269
dogs, periodontal disease 447
dot/icm genes 253, 256
drug development, new 117, 154
drug resistance 274, 348
Candida 468
evolution 323
Gram-negative bacteria 154
leprosy 218
Salmonella 132

E

E6
bovine papilloma virus 174
human papilloma virus 173
E6 associated protein (E6AP) 173
E6 binding protein (E6BP) 174
Ebola virus 258
receptor binding/fusion glycoprotein (GP) 258
secretory glycoprotein (SGP) 258
echoviruses, cell receptors 198
elastase 7
emerging virus diseases 160
Encephalitozoon cuniculi 22
endophytes, diazotrophic 139, 202
endoplasmic reticulum (ER), microbial modulation 212
endosomal–lysosomal compartment
CD1 molecules 455
Leishmania parasitophorous vacuoles 392
microbial modulation 212, 253, 256, 331
endosymbioses 263, 342, 345
endothelial cells, Ebola virus infection 259
endothelium, in bacterial infections 429
endotoxin, novel drugs targeting 154
engineered disease resistance 31, 54, 466
enteric bacteria, fimbrial expression 282
Enterococcus faecalis 292
Enterocytozoon bieneusi 19
enterotoxin subunits, expression in plants 451
enteroviruses, cell receptors 198
env region, HTLV-I and STLV-I 478
environmental factors, *Candida* gene expression 469
enzymes, archaeal 307
epidemiology
heterogeneous transmission 50 (L)
molecular, HTLV-I 477
epidermin 66
epithelial cells, neisserial uptake 489
Epstein–Barr virus (EBV) 276
LMP-1 protein 175, 177
ergosterol synthesis 119
Erwinia carotovora 205
Escherichia coli
bacteriocins 66
cytoskeleton 234
enteroaggregative (EAEC) 285
enterohemorrhagic (EHEC) 228, 285
enteropathogenic (EPEC) 169, 172, 284, 364, 388 (L)
enterotoxigenic (ETEC) 284, 451
F plasmid 269
fimbrial expression 282
gadCB 214
lipid A 154
Shiga toxin-producing (STEC) 295
uropathogenic 347
Euglena gracilis 1
evolution
β-lactamases 323
endosymbioses 342
microsporidia 19
reductive, of resident genomes 263
RNA polymerases 1
exotoxins, molecular crosstalk by 228
extracellular matrix (ECM)
staphylococcal binding proteins 484
in *Volvox* sexual development 185
extremophiles 307

F

F plasmid 269
Fas (CD95) 337
fibrinogen-binding proteins, *Staphylococcus aureus* 486
fibronectin-binding proteins, *Staphylococcus aureus* 484
filoviruses 258
fimbria, enteric bacteria 282
fitness, circadian rhythmicity and 408
fluorescence microscopy 233
follicle-associated epithelium (FAE) 359
food poisoning 62, 134 (L)
foot-and-mouth disease virus (FMDV) 199, 451
Frankliniella occidentalis 31
fructose 2,6-bisphosphate 314
fructose 6-phosphate 314
FtsZ 233
fungal infections, new drug development 117
fungi
cell wall 117
humoral immunity 102
microsporidian relationships 19
Pneumocystis carinii and 71

G

gadCB operon 214
gammaherpesviruses 276
gene conversion, in *Trypanosoma brucei* 114
gene expression, regulation in Archaea 225
gene transfer
antibiotic-producing *Streptomyces* 76
from endosymbionts 344
genome(s)
Aquifex aeolicus 219
Archaeoglobus fulgidus 9
Bacillus subtilis 9
Bordetella pertussis 352
Borrelia burgdorferi 52
Campylobacter jejuni 100
Chlamydia spp. 182
Clostridium difficile 389
Franciscella tularensis 389
Methanococcus spp 9
Mycobacterium tuberculosis 52, 304, 464
navigator 184
Neisseria meningitidis 100
Pseudomonas aeruginosa 136

resident, reductive evolution 263
rickettsiae 136, 263
sequencing 297, 346, 464
size, of pathogens 464
spirochaete 52, 434
yeast 475
Yersinia pestis 261
genomics 346
comparative 347
functional 348
web sites 221
Giardia 344
gluconeogenesis, in yeast 314
glucose, sensing and signaling in yeast 314
glucose 6-phosphate 317, 472 (L), 473
glucose monomycolate (GMM), presentation by CD1 454
glutamate decarboxylases, bacterial 214
glutamate dehydrogenase 309
glycocalyx, M cell 361
glycolipids
mycobacterial surface 331
presentation by CD1 454
glycolysis, activation in yeast 314, 472 (L), 473
glycopeptide antibiotics 81
gramineous plants, diazotrophic endophytes 139, 202
granulomas, tuberculosis 94, 180 (L)
grasses, diazotrophic endophytes 139, 202
green fluorescent protein (GFP) 233
groundnut ringspot virus (GRSV) 32
growth, bacterial *in vivo* 239
gut-associated lymphoid tissue (GALT), in HIV pathogenesis 419, 420
gyrase 269

H

H-19B 295
Haemophilus ducreyi 427
Haemophilus influenzae 299, 348
Haloarcula marismortui 311
Haloferax mediterranei 225
Haloferax volcanii 312
halophiles, extreme 311
Hayflick limit 144
hDLG 174
heat-shock proteins (Hsps)
in stress tolerance 43
as virulence factors 426
Helicobacter pylori 347, 427
host interactions 379, 380, 381
VacA 127, 128
hemolytic uremic syndrome (HUS) 229
hemorrhagic fever, Ebola virus 258
hemostasis, microbial interactions 428
heparan sulfate proteoglycans (HSPGs), neisserial interactions 489
hepatitis B surface antigen 450
Herbaspirillum 139
herpes simplex virus type 1 (HSV-1), molecular mimicry 211
herpes stromal keratitis (HSK) 211
herpesvirus saimiri (HVS) 276
herpesviruses, gamma 276
heterogeneous transmission 50 (L)
hexose kinases 316, 472 (L), 473
histidine protein kinases 366
HIV
chemokine receptors 244
in gut-associated lymphoid tissue 419, 420
latent infection 129
molecular chaperones and 427
nuclear entry/exit 178
in *Pneumocystis carinii* pneumonia 71
Rev 179
T-cell telomeres 144
zoonotic origin 412
HLA associations
autoimmune diseases 211
leprosy 148
tuberculosis 148
HMW1–HMW3 proteins 16
host defenses
evasion mechanisms *see* immune evasion
Pneumocystis carinii 71, 97 (L)
host–pathogen interactions
avirulence genes 3
enterohemorrhagic *E. coli* 228
Helicobacter pylori 379, 380, 381
in vivo 239
Listeria monocytogenes 11
M cells 360
Mycobacterium tuberculosis 328
neisserial Opa proteins 489
in periodontal disease 444
Toxoplasma gondii 27
Hrp proteins 98 (L)
human herpesvirus 8 (HHV-8) 276
human immunodeficiency virus *see* HIV
human leucocyte antigen associations *see* HLA associations
human papillomavirus (HPV)
and cancer 424
E6 binding proteins 173
human T-cell lymphotropic virus type I (HTLV-I), simian origins 477
human T-cell lymphotropic viruses (HTLVs) 412
humoral immunity, intracellular pathogens 102, 135 (L), 136
hyphae, *Candida albicans* 92, 469

I

icm/dot genes 253, 256
IdeR 354
IgA proteases 7, 370, 388 (L)
imipenem 203
immune evasion 88
cytomegalovirus 190, 260 (L)
Leishmania 392
mycoplasmas 438
immunocompromised patients
cytomegalovirus infections 190
Pneumocystis carinii pneumonia 71
immunosuppression, in mycobacterial infections 148
in vivo bacterial pathogenicity 239
in vivo expression technology (IVET) 241
infectious mononucleosis 281
influenza virus 259
insecticidal products, plant-derived 56
INT1 300, 302
integrins 300, 302, 363
interferon γ (IFN-γ)
in cytomegalovirus infections 192
in tuberculosis 95, 180 (L)
interleukin 1 (IL-1), Shiga toxin interactions 229
Internet resources
ATCC 262
biotechnology task group 138
Genome Navigator 184
genomics 221
National Center for Infectious Diseases 10
paleontology 306
plant pathology 53
quorum sensing site 101
intestine, attachment of enteric bacteria 282
intimin 169, 172, 388 (L)
intracellular parasites, obligate 263
intracellular pathogens
antibody-mediated protection 102, 135 (L), 136
host cell signaling 11
inhibition of phagosome–lysosome fusion 212
Legionella pneumophila 253
microsporidia 19
Mycobacterium tuberculosis 47, 49, 328
Toxoplasma gondii 27
vaccines 102, 135 (L), 433 (L)
iron regulation, mycobacterial 354
isoniazid resistance 354
Ity/Lsh/Bcg gene 148, 441

K

Kawasaki syndrome 63

L

β-lactamases, evolution 323
β-lactams, biosynthetic pathways 203
Lactobacillus 89
Lactobacillus lactis, gadCB 214
lantibiotics 66
LasR–LasI regulatory system 383
latent infections
cytomegalovirus 190
gammaherpesviruses 276
HIV 129
tuberculosis 107
Legionella pneumophila
coiling phagocytosis 384
icm/dot genes 253
inhibition of phagosome–lysosome fusion 212
macrophage cytotoxicity 256
Legionnaires' disease 253, 256
Leishmania
parasitophorous vacuoles 392
phagocytosis 386
virulence genes 35
Leishmania major, molecular chaperones 426
leishmaniasis 35
leprosy
control programme 217
HLA associations 148
post-elimination research agenda 217
Lewis b (Le^b) antigen 379, 381
lipid A, novel agents targeting 154
lipid antigens, presentation by CD1 454
lipoarabinomannan (LAM), presentation by CD1 454
lipophosphoglycan (LPG) 35
lipopolysaccharide (LPS), novel agents targeting 154

Listeria monocytogenes 364
host cell signaling 11
LMP-1 protein 175, 177
Lyme disease 44, 211
lymphoproliferative disease 280
Lysobacter enzymogenes 6
lysogenic conversion 295
lysosomes, microbial modulation 212, 253, 256, 331, 386, 392
lysostaphin 67

M
M cells 283, 359
macronucleus, ciliate 322
macrophages
in cytomegalovirus infections 195
cytotoxicity of *Legionella pneumophila* 253, 256
HIV-1 tropism 244
Leishmania parasitophorous vacuoles 392
Listeria monocytogenes infection 11
modulation by mycoplasmas 438
Mycobacterium tuberculosis infection 47, 49, 94, 328
major histocompatibility complex (MHC)
class I, subversion by cytomegalovirus 190, 260 (L)
in *Leishmania* parasitophorous vacuoles 395
mycobacterial disease and 148
see also HLA associations
mannose-binding protein (MBP) 330
mannose receptors (MR) 330, 456
Marburg virus 258
measles 50 (L)
membranous epithelial cells (M cells) 283, 359
memory T cells, latent HIV infection 129
Methanococcus igneus 310
Methanococcus jannaschii 226, 312, 347
Methanococcus maripaludis 225
Methanopyrus kandleri 312
MHC *see* major histocompatibility complex
microcins 66
microsporidia, origins of 19
microtubules, in *Trypanosoma brucei* 320
minichromosomes, *Trypanosoma brucei* 319
mismatch repair 269
mitochondria 343, 345
genomes, reductive evolution 263
in microsporidia 21
transcription 1
mitogenicity, mycoplasmas 439
mitosis
bacterial 233
in *Trypanosoma brucei* 319
molecular crosstalk, microorganism–host cell 228
molecular epidemiology, HTLV-I 477
molecular genetics, antibiotic-producing *Streptomyces* 76
molecular mimicry 211
Helicobacter pylori 380, 381
molecular techniques, identification of novel viruses 160, 180 (L)
Mollicutes 436
monocytes, modulation by mycoplasmas 438
morphogenesis 300
Candida 92, 469
movement protein, tobacco mosaic virus 467
moving junction, *Toxoplasma gondii* 28
MSCRAMMs (microbial surface components recognizing adhesive matrix molecules) 484
mucosal immune system, vaccination and 449
Muller's ratchet 263
murine gammaherpesvirus 68 (MHV-68) 276
mycobacteria
CD1 presentation of antigens 454
inhibition of phagosome–lysosome fusion 212
iron regulation 354
Mycobacterium avium complex 464
Mycobacterium bovis 94
Mycobacterium leprae 148, 217, 347, 465
Mycobacterium smegmatis 354
Mycobacterium tuberculosis 347
'capsule' 331
chaperones 427
complement system and 47, 49
genomic sequence 464
HLA associations 148
host cell interactions 328
immunopathogenesis 94, 180 (L)
iron regulation 354
latency 107
Nramp1 in murine resistance 441
polysaccharides 331
Mycoplasma arthritidis 439
Mycoplasma genitalium 266, 436
Mycoplasma penetrans 437
Mycoplasma pneumoniae 436
cytadherence 15
Mycoplasma pulmonis 439
mycoplasmas, subversion/exploitation of host cells 436
mycoses, new drug development 117
myosins, *Toxoplasma gondii* 98 (L)

N
N gene, tobacco mosaic virus 466
National Center for Infectious Diseases 10
natural killer (NK) cells, in cytomegalovirus infections 195
Nectria haematococca 57
Neisseria, Opa proteins 489
Neisseria gonorrhoeae, IgA proteases 7, 370, 388 (L)
Neisseria meningitidis 347
nerve damage, in leprosy 217
NF-κB 175
nitrogen-fixing bacteria, endophytic 139, 202
Norwalk virus 450
Nosema bombycis 19
Nosema locustae 21
Nramp1, in tuberculosis resistance 441
nuclear pore complex (NPC) 178
nucleus, export/import of microorganisms 178
nutrients, regulation of fimbrial expression 286

O
oligopeptide permease (Opp) 290
Opa proteins, neisserial 489
opsonization, *Mycobacterium tuberculosis* 47
organelles 342, 345
see also chloroplasts; mitochondria
OspA (outer surface protein A) 44, 211
oxidative stress, in mycobacteria 354

P
p53
polymorphism, and HPV-associated cancer 424
protein, HPV E6 interaction 173
paleontology 306
Pantoea agglomerans 139
papillomaviruses, and cancer 424
parasites, obligate intracellular 263
parasitophorous vacuoles, *Leishmania* 392
pathogen-derived resistance 54
pathogenesis
AIDS 244
bacterial 3, 382
bacterial *in vivo* 239
Candida infections 468
chronic bacterial infections 303 (L)
Ebola virus 258
enteric infections 282
enterohemorrhagic *E. coli* 229
enteropathogenic *E. coli* 169
gammaherpesviruses 278
Helicobacter pylori 379, 380, 381
Lyme disease 45
Mycobacterium tuberculosis 47, 94, 180 (L)
periodontal disease 444
picornavirus infections 198
Salmonella infections 132
pathogenesis-related (PR) proteins 54
pathogenicity islands (Pais) 347
pattern recognition receptors, bacterial DNA 496
paxillin 174
peptic ulcers 127
peptide signaling 288
periodontal disease 88
animal models 444
pH, bacterial cytoplasmic 214
phagocytosis
coiling 384
Legionella pneumophila 256
Listeria monocytogenes 12
Mycobacterium tuberculosis 47
Neisseria 491
zipper-type 384
phagosome–lysosome fusion, inhibition of 212, 253, 256, 331
phase variation
Helicobacter pylori 380
Neisseria meningitidis 489
pheromones
peptide, of bacteria 288, 382
sex-inducing, of *Volvox* 185
pherophorins, *Volvox* 185
phocine distemper virus 50 (L)
phosphatidyl-inositol mannosides (PIMs) 330
phosphofructokinase (Pfk) 314
phospholipase A_2 339
phosphorelay signal transduction mechanism 366
PhrA peptides 368
phytoalexins 57
picornaviruses, cell receptors for 198
pigs, risk of xenotransplant-associated infections 411, 430 (L), 431 (L), 432 (L)

pili 98 (L), 282
plasminogen/plasmin system 429
  in Lyme disease 46
Plasmodium falciparum 348
plastids 343, 345
pneumococcus *see Streptococcus pneumoniae*
Pneumocystis carinii, immune response 71, 97 (L)
poliovirus
  receptor 198
  recombination 423
polyketide synthases (PKS) 79, 464
polymerase chain reaction (PCR)
  consensus primer 180 (L)
  degenerate 160
porcine endogenous retrovirus (PERV) 414, 430 (L), 432 (L)
pore formation

RNA viruses, recombination 421
RNAIII-activating protein (RAP) 461, 463
rodent models, periodontal disease 444
RPOY/RPOZ 1

S

Saccharomyces boulardii 90
Saccharomyces cerevisiae
  activation of glycolysis 314, 472 (L), 473
  INT1 expression 300, 302
  morphogenesis 93
  thermotolerance 43
Salmonella 88, 228
  antibody-mediated protection 102, 135 (L), 136, 470 (L), 471
  avirulence genes 4
Salmonella enterica 282
Salmonella paratyphi-A 131
Salmonella typhi 132, 433 (L)
  antibody-mediated immunity 470 (L)
  genetic diversity 339
Salmonella typhimurium 105, 132, 362
  in vivo pathogenicity 239
satellite RNA 422
Schizosaccharomyces pombe, stress tolerance 43
Sdr family proteins, *Staphylococcus aureus* 487
secretion systems
  Gram-negative bacteria 370
  type III *see* type III secretion systems
  type IV 371, 388 (L)
senescence, cell 144
Serratia marcescens 205
sex-inducing pheromone, *Volvox* 185
sexual reproduction, in *Volvox* 185
Shiga toxins (Stx) 228, 295
Shigella 88
Shigella flexneri 285, 364
  gadCB 215
SHV β-lactamase 324
siderophores, mycobacterial 354
sigF gene 111
signal transduction
  in *Dictyostelium* development 402
  Epstein–Barr virus LMP-1 protein 175, 177
  Listeria monocytogenes-infected cells 11
  phosphorelay mechanism 366
signature-tagged mutagenesis (STM) 241
simian immunodeficiency virus (SIV), in gut $CD4^+$ T cells 419, 420
simian retroviruses 412
simian T-cell lymphotropic viruses (STLVs) 412, 477
SOS pathway 269
SP-A receptors 330
species specificity, enteropathogenic *E. coli* 388 (L)
sphingolipids 120
sporulation initiation, in *Bacillus subtilis* 366
staphylococcal superantigens 62
Staphylococcus aureus 68
  experimental vaccines 461, 463
  surface protein adhesins (MSCRAMMs) 484
Staphylococcus epidermidis 66
Staphylococcus simulans bv. *staphylolyticus* 67
Streptococcus
  as probiotic/prebiotic 89
  superantigens 63
Streptococcus pneumoniae 292, 364
  avirulence genes 4
  competence regulon 297, 299
  novel surface proteins 85, 87
Streptococcus pyogenes 298
Streptomyces, antibiotic-producing 76, 203
Streptomyces cattleya 203
Streptomyces clavuligerus 204
Streptomyces coelicolor 292
Streptomyces fulvoviridis 205
stress tolerance, roles of Hsps and trehalose 43
subtractive hybridization 160
Sulfolobus acidocaldarius 222
Sulfolobus solfataricus 309
super-ribosomal protein gene operon 266
superantigens 61, 134 (L)
symbiogenesis 342
Synechococcus, circadian programs 407

T

T cells
  HIV persistence 129
  HIV-1 tropism 244
  presentation of lipid antigens to 454
  responses to bacterial DNA 496
  superantigens 61, 134 (L)
  telomere length in HIV infection 144
  tuberculous granulomas 94

TATA-like element, archaeal 222
tax region, HTLV-I and STLV-I 481
TBP, archaeal 222
telomeres
  exchange 114
  in HIV-1 infection 144
  position effect 115
  trypanosome 113
TEM-1 β-lactamase 323
temperature regulation, fimbrial expression 286
temporal separation, biochemical processes 408
Tetrahymena 322
TFB, archaeal 223

Th1 T cells
CpG DNA vaccines and 23
response to bacterial DNA 496
thermophiles 307, 349 (L)
Thermoplasma acidophilum 307
Thermotoga maritima 349 (L)
thermotolerance 43
Thermus aquaticus 313
thienamycin 203
thionins 58
Tir 169, 172, 388 (L)
tobacco mosaic virus (TMV) 54, 466
tomato chlorotic spot virus (TCSV) 32
tomato spotted wilt virus (TSWV) 31
topoisomerases 269
tospoviruses 31
toxic shock syndrome 62, 134 (L)
toxin–antidote systems 269
toxins, intracellularly acting 127, 128
Toxoplasma gondii 257
host cell invasion 27, 98 (L)
inhibition of phagosome–lysosome fusion 213
transcription
in Archaea 222
in chloroplasts and mitochondria 1
elongation, archaeal 225
transcription factors, archaeal 222
transfer RNAs (tRNAs), mitochondrial 264
transforming growth factor β (TGF-β), in cytomegalovirus infections 195
transgenic plants
disease resistant 466
production of oral vaccines 449
translation, in Archaea 226
trehalose 43
trehalose 6-phosphate (T6-P) 317
Treponema pallidum 347
tropism
enteropathogenic *E. coli* 172, 388 (L)
HIV-1 244
picornaviruses 198
Trypanosoma brucei
antigenic variation 113
segregation of minichromosomes 319
tuberculosis 464
HLA associations 148
immunopathogenesis 94, 180 (L)
latency 107
murine, *Nramp1* in resistance 441

tumor necrosis factor (TNF), adenoviral inhibitor 337
tumor necrosis factor α (TNF-α)
in cytomegalovirus infections 192
Shiga toxin interactions 229
turnip crinkle virus (TCV), recombination 421
tylosin 78
type III secretion systems (TTSS) 98 (L), 256
avirulence and 4
enteropathogenic *E. coli* 169, 172, 388 (L)
type IV secretion systems 371, 388 (L)
typhoid fever 131, 339, 433 (L)
antibody-mediated immunity 135 (L), 470 (L), 471

V

VacA 127, 128
vaccines
DNA 23, 496
intracellular pathogens 102, 135 (L), 433 (L)
leprosy 148, 218
Lyme disease 45
mucosal 449
oral, transgenic plants producing 449
pneumococcal 85, 87
Salmonella 131, 135 (L), 470 (L), 471
staphylococcal 461, 463
vacuoles
Leishmania parasitophorous 392
microbial survival 212
VacA-induced formation 127, 128
Vairimorpha necatrix 21
variant surface glycoprotein (VSG) 113
Vibrio cholerae
cholera toxin 296, 451
fimbrial expression 284
protective effects of probiotics 91
virulence
animal pathogens 3
bacteriophage-encoded 295
Candida albicans 92
enterohemorrhagic *E. coli* 228
factors, Gram-negative bacteria 370
genes, *Leishmania* 35
in vivo bacterial 239
molecular chaperones in 426
staphylococcal vaccine targeting 461, 463
virus-like particles (VLPs), expression in plants 450
viruses
molecular chaperones 427
molecular identification of novel 160, 180 (L)
nuclear entry/exit 178
RNA, recombination 421
Volvox carteri, sex-inducing pheromone system 185

X

Xanthomonas campestris 4
xenotransplantation, risk of retroviral zoonoses 411, 430 (L), 431 (L), 432 (L)

Y

yeast *see Saccharomyces cerevisiae; Schizosaccharomyces pombe*
Yersinia 4, 88, 256, 427
Yersinia enterocolitica 63, 228, 363
Yersinia pseudotuberculosis 363

Z

zoonoses, xenotransplantation risks 411, 430 (L), 431 (L), 432 (L)
